

ABSTRACT OF THE DISCLOSURE

One of the amount of induction heating by a coil  
and that of induction heating by coils is  
increased/decreased relative to the other, and the  
5 ratio of the amount of the induction heating by the  
coil to that of the induction heating by the coils, at  
which the amount of the induction heating by the coil  
increases and that of the induction heating by coils  
decreases, is set at, e.g., "9:1", and the ratio of the  
10 amount of the induction heating by the coils to that of  
the induction heating by the coil, at which the amount  
of the induction heating by the coils increases and  
that of the induction heating by coil decreases, is set  
at, e.g., "7:3".
